

ABSTRACT OF THE DISCLOSURE

A poultry cooking device including a metal plate having a plurality of fingers partially cut therefrom. The fingers are folded such that they extend upwardly from the metal plate and leave a plurality of apertures in the metal plate when moved from their original positions. The fingers are located about the metal plate such that they define a keeper for snugly receiving a beverage container upon which a chicken can be impaled and cooked. The apertures are positioned around the keeper to hasten cooking and enhance flavor.
